

STYLE MEETS SUBSTANCE

With their stylish new look and large LCD screens, the IXUS 60 and IXUS 65 digital cameras look just as great as the photos they take. Featuring 6.0 megapixel resolution and the DiGiC II image processor, they produce crystal clear photos which can be printed up to A3 in size. Add to this a Canon 3x optical zoom lens and ultra compact metal body and you have the perfect accessory for when you're out and about.

CANON'S FORMULA FOR AMAZING DIGITAL PHOTOS

DiGiC II DELIVERS SPEED AND DETAIL

The purpose-built DiGiC II image processor is a single chip that acts as the brain of the camera. DiGiC II offers super fast start-up and autofocus. It also enables continuous shooting at a constant speed, no matter how many shots you take.* Most importantly, DiGiC II delivers brilliant images with greater clarity and accurate colour.

A LARGE LCD SCREEN MAKES SHARING EASY

Boasting a huge 3.0 inch LCD screen, the IXUS 65 featured below, and the IXUS 60's 2.5 inch screen are great for sharing your photos and movies instantly with friends.

EASY-TO-USE SHOOTING MODES

Use Auto mode to simply point and shoot. Alternatively, select one of the many pre-set shooting modes and let the camera tweak the settings to give you the perfect shot, no matter where you are.

GET CREATIVE WITH COLOUR

With the new My Colour feature you can now experiment with the colour settings on the camera. Make blues bluer, or greens greener, to enhance your shots even more. Or try something different and add colour accents to black and white photos or change entire colours in full colour shots – all without going through a computer.

CREATE YOUR OWN STUNNING PANORAMAS

Use the built-in Stitch Assist mode to perfectly line up each new photo with the last, creating seamless and stunning panoramas.

MAKE YOUR OWN MOVIES

Sometimes a still image just isn't enough. So why not record your own mini movies with sound until the memory card is full or up to 1GB (depending on memory card speed and capacity). Then edit your movie 'in-camera' and share it with friends via email, or play it on your TV.

PRINT PHOTOS WITH EASE

You don't need a computer to print your photos. Simply connect the camera to a Canon Bubble Jet Direct printer, Canon Compact Photo printer or any compatible PictBridge printer, select your image and press the 'Print/Share' button.** Simple.

With its high resolution 6.0 megapixel CCD, you can print up to A3+ size with superb detail.

**Compatible printer required for Direct Printing.
